Liberta Prima

Perfect 3D software to design your wooden roofs!
WETO AG technologies

Create roof trusses effortlessly and in the shortest possible time thanks to the integrated wizards for profile entry and roof design.

Realize dormers, skylights and chimneys with automatic replacement with just a few clicks!

In the three-dimensional real-time preview you can visually follow every adjustment in the roof input without any time delay.

Visualize the complete construction project with a detailed representation of windows and doors.

Present a multi-storey solid house with the help of the automatic adaptation of walls to the roof,
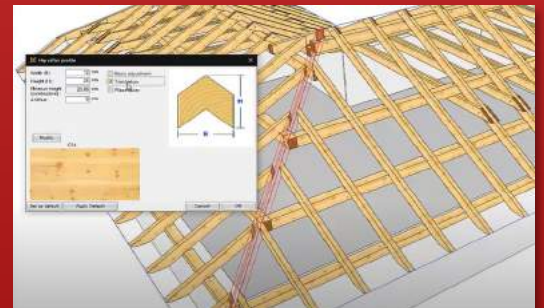

...and much more!

CLEAR AND EFFECTIVE 3D REPRESENTATIONS!

Thanks to the automatic wall-to-roof adaptation tool, you can freely modify the walls.
Special functions for planners and carpenters

Free insertion of the struts

Create ridge and valley rafters
